

Step 1: Install and Configure Git

Install Git:

- Mac: Git is usually pre-installed. If not, install via Homebrew:

```
brew install git
```

- Windows: Download from <https://git-scm.com> and install

- Linux:

```
sudo apt install git
```

Configure Git identity:

```
git config --global user.name "Your Full Name"
```

```
git config --global user.email "your_email@example.com"
```

Step 2: Clone the Repository

```
git clone https://github.com/LCIT-AISC-T3-S25/Group3.git
```

```
cd Group3
```

```
git checkout -b nlp-assignment-1 origin/nlp-assignment-1
```

Step 3: Set Up HTTPS Authentication with GitHub Token

1. Go to: <https://github.com/settings/tokens>

2. Click "Generate new token (classic)"

3. Set:

- Expiration: 30 or 90 days

- Scope: repo (select all repo permissions)

4. Click Generate token and copy the token

Step 4: Commit and Push

```
git add .
```

```
git commit -m "Your commit message"
```

```
git push origin nlp-assignment-1
```

When prompted:

- Username: your GitHub username (e.g., your-username)

- Password: paste the token you just generated (not your GitHub password)

Step 5: Save Credentials for Future Pushes

To avoid entering the token every time:

Mac:

```
git config --global credential.helper osxkeychain
```

Windows/Linux:

```
git config --global credential.helper cache
```

Step 6: Always Pull Before You Push

Before pushing new changes, always do:

```
git pull origin nlp-assignment-1 --rebase
```

Then push:

```
git push origin nlp-assignment-1
```

Let me know if you run into any trouble.
